The background is a solid yellow color. It features several abstract geometric shapes: a blue triangle in the top-left corner, a large orange circle in the top-center, a blue hexagon in the bottom-right corner, and a large orange circle in the bottom-center. A dark blue horizontal bar is positioned above the main title box.

Systematic Review and Meta-Analysis

Dr. Abdulkadir HAKTANIR

Agenda

- A short history of academic publishing
- What is a literature review?
- What is systematic review (SR)?
- Why is SR important?
- Creating an SR protocol (an example)?
- What is meta-analysis (MA)?
- A brief demonstration of MA?

When do think the first academic journal might have gotten published?

- Le Journal des Sçavans
- Philosophical Transactions of the Royal Society
- Medical Essays and Observations

LITERATURE REVIEW

What is a literature review?

Why do we review the literature?

Systematic Review

A systematic review is a literature review that is designed to locate, appraise and synthesize the all available evidence relating to a specific research question in order to provide informative and evidence-based answers.

Type of Systematic Review (Munn et al., 2018)	Goal	Research Question Example
Effectiveness	To evaluate the effectiveness of a certain treatment/practice in terms of its impact on outcomes	What is the effectiveness of Behavioral Therapy in reducing aggressive behaviors?
Meta-ethnography & Meta-synthesis	To investigate the experience or meaningfulness of a particular phenomenon	What are the Post-Traumatic experiences of refugees, if any, after migrating to another country?
Prevalence and/or incidence	To determine the prevalence and/or incidence of a certain condition	What is the prevalence of suicide attempts that were reported to hospitals in Ankara?
Diagnostic Test Accuracy	To determine how well a diagnostic test works in terms of its sensitivity and specificity for a particular diagnosis	Can BDI distinguish individuals diagnosed with depression from those who did not receive a depression diagnosis?
Psychometric	To evaluate the psychometric properties of a certain test, normally to determine how the reliability and validity of a particular test or assessment.	What are the reliability, validity, interpretability, and sensitivity of self-control scales?

SYSTEMATIC REVIEW

Boland et al., 2017

1. Planning the Systematic Review

Background
search
(PROSPERO)

Time

Collaborators

Tools and
Organization

2. IDENTIFYING INCLUSION AND EXCLUSION CRITERIA

Finalize Research
Question

Identify inclusion and
exclusion criteria

Write a protocol

3. CARRYING OUT SEARCH

Library access is
crucial

AND, OR,
NOT

?, *, \$

WILDCARDS*

Wildcard	Function	Example
?	Search for a part of a word	wom?n will find woman and women
*	Produce alternative words from the same root	psychiatr* = psychiatrist, psychiatry ...
\$	Include a search term and its plurals	trial\$ = trial and trials

4. APPLYING INCLUSION AND EXCLUSION CRITERIA

Screening titles
and abstracts

Screening and
selecting full-text
papers

Collect references
and remove
duplicates

5. DATA EXTRACTION

Advise to your advisor
to identify relevant data

Extract relevant
data (multiple
researchers)

6. QUALITY ASSESSMENT

- The quality assessment tools will vary depending on the purpose and field of your SR.
- PRISMA can be used to ascertain the quality of the SR.

META-ANALIZ

MA is a quantitative analysis of multiple studies to yield a single value showing the effectiveness of a particular method.
